

## Data Scientist (m/w/x)

The Data Scientist is an IT expert responsible for data extraction, processing, aggregation and evaluation. He performs quantitative and qualitative data analysis to identify non-visible system errors and risks. He has a perfect command of the professional visualization of analysis results. He is an expert with many years of relevant professional experience in dealing with data modeling, design, implementation and testing of extraction, loading and transformation programs based on Microsoft SQL Server.

### Tasks:

- Data extraction and data aggregation as well as preparation of internal and external company data
- Qualitative and quantitative analyses of data to identify hidden errors and risks
- Professional visualization of analysis results
- Data modeling, design, implementation and testing of extraction, loading and transformation programs (ETL) on the basis of Microsoft SQL Server

### Qualifications:

- Successfully completed studies in (business) computer science, (business) ma-topic or a comparable course of studies
- 1-3 years experience in a comparable data scientist function, preferably with international agile companies
- Knowledge of database systems, preferably MS SQL Server, ETL approaches and systems, SQL programming
- Fluent in German and English

Salary recommendation: € 80.000 – 90.000 p.a. (depending on location and salary)

*Status May 2019*
