

IoT-Spezialist (m/w/x)

The IoT specialist is responsible for the development and testing of software components and systems for innovative products based on Internet of Things (IoT). He designs and implements data models for IoT / Industry 4.0 applications, accompanies all project phases, including requirements analysis, design and testing, and works on bugfixing existing software. He also accompanies test specifications and analyses, performs automated tests and is responsible for their documentation. During the implementation phase, he supports the hardware teams.

Tasks:

- Responsibility for development and testing of software components and systems based on IoT
- Adaptation and connection of new IoT systems
- Implementation of commissioning of IoT software products and visualization of systems at the end customer's site
- Interface function between customer and developer as well as close cooperation with sales, service and project management
- Conducting of software tests as well as creation of error reports and bug fixing
- Ensuring the proper presentation of the company's own products to the customer

Qualifications:

- Successfully completed studies in electrical engineering, computer science, automation technology, mechatronics or comparable qualification
- 3-5 years experience in a comparable IoT function, preferably in the development of e-commerce activities for an international company
- Confident appearance, analytical thinking and understanding of complex interrelationships
- High contact and communication skills, positive charisma
- Negotiation and presentation skills
- Ability to work in a team and self-reliant, independent and structured way of working
- Good knowledge of English and willingness to travel internationally

Salary recommendation: € 80.000 – 90.000 p.a. (depending on location and salary)

Status May 2019
